DETAILED ACTION

Claim Objections

Claims 4-10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,981,268 to Kovacs et al..

Regarding claim 1, Kovacs et al. disclose a plurality of micro-electrodes provided on a first region on a substrate (column 7 lines 1-10, Fig. 1 elements 7 and 8), a reference electrode provided in a second region on the substrate (column 7 lines 15-17, Fig. 1 element 4), wherein the reference electrode includes at least one stimulus reference electrode for applying an electrical signal to the plurality of microelectrodes (column 7 lines 10-12, Fig. 1 element 10).

Regarding claim 2, Kovacs et al. disclose a reference electrode for detecting an electrical signal from the plurality of micro-electrodes (column 7 lines 15-17, Fig. 1 element 12) and stimulus reference electrodes insulated from the measurement reference electrode (column 12 lines 17-31).

Application/Control Number: 10/019,417

Art Unit: 2858

Regarding claim 3, Kovacs et al. disclose the second region placed at a distance from

Page 3

outer edge of first region (Fig. 1 elements 8 and 4) and is in a second region surrounding the first

region (Fig. 1 elements 4,7 and 8).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure. The following is cited to further show the state of the art with respect to micro-

electrode sensing arrays on substrate methods and devices in general:

U.S. Patent No. 6,315,940 to Nisch et al. disclose a plurality of microelement sensors

disposed on a substrate to contact cells in a liquid environment.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to John Teresinski whose telephone number is (703) 305-4746.

The examiner can normally be reached on M-F 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, N. Le can be reached on (703) 308-0750. The fax phone numbers for the

organization where this application or proceeding is assigned are (703) 872 9319 for regular

communications and (703) 872 9318 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703) 308-0956.
